ACTIVATIONS · NEWCO

The gold layer gets acted on, not just queried

Activations is the fourth native NewCo stage, right after Transformations. The instant gold.fct_assessment_current flags a parcel with an assessed-value jump over 20% year over year, no matching row in gold.fct_appeals for the current filing year, and the county's appeal-filing deadline inside 30 days, Activations pushes that parcel straight into Granicus GovDelivery as a segmented subscriber — no reverse-ETL vendor, no second copy of the data, no analyst re-keying names into a spreadsheet once a quarter.

TRIGGER	DESTINATION	PRE-DEADLINE FILING RATE
20%+ YoY	**GovDelivery**	**18% → 52%**
value shock, no appeal, deadline ≤30 days	Assessment_Shock_Subscribers	assessment-shock parcels, per cycle

WHAT YOU SAY	WHAT YOU SHOW
"Assessment shock drives most of our appeal-season call volume. Right now, the moment a parcel's assessed value jumps more than 20% year over year with no appeal on file, that fact sits in gold.fct_assessment_current — but nobody acts on it until an analyst runs Friday's report."	**gold.fct_assessment_current flips a row's shock flag to true on screen — assessed value up 24.6%, no appeal on file, deadline in 22 days.**
"Watch this instead. The second dbt marks a parcel 'shock, no appeal, deadline in 30 days,' Activations picks up that segment on the next scheduled sync and pushes it straight into Granicus GovDelivery as a subscriber list — value-change percentage, deadline date, and neighborhood already sitting in merge fields."	**Architecture page → Activations panel → /activations-live: Segment Definition → Field Mapping → API Push.**
"The outreach team's deadline-reminder campaign fires against a list that's minutes old, not weeks old."	**/activations-live → Destination Confirmation table; subscriber count ticks up and merge fields populate within the sync window.**
"Last cycle, moving this from quarterly-manual to sync-on-build took the pre-deadline filing rate from 18 percent to 52 percent, and cut projected post-certification refund liability by an estimated $1.8 million."	**Before/After panel → Reverse-ETL hop row: Census + Hightouch replaced by NewCo Activations, native.**

Modeled outcome: closing the pre-deadline window is estimated to cut projected post-certification refund-and-interest liability by $1.8M per appeal cycle and pull roughly 3,100 avoidable calls out of the assessor's call-center queue during the 40-day appeal window. Allegheny County Tax is a fictional demo entity — synthetic data only.
